Dear Hiring Manager,

November 27th, 2019

As a MSC in Computer Science specialized in data science, I am looking for an internship as a Data Scientist. This internship or V.I.E is part of my curriculum as my last semester. This means I will graduate at the end of this opportunity. Recently, I started to gain interest in finance and that's why I am currently doing a semester abroad, in Krakow, Poland, to study mathematical finance.

I'm autonomous and very dedicated in everything I do. I believe that my work discipline and my rigor would be a great asset to my team and department and my 6 months internship as a .NET developer gave me a good understanding of a company's expectation for data related projects.

I worked on a rocket launch project at my university for the C'Space Contest of French CNES. This is a complex project in which I improved my adaptability, problem solving and time management skills. These skills have been used in other projects, often data and forecasting related.

I also developed my collaboration skills through sports, especially with soccer and competitive badminton. In sports, like in business, communication and understanding of others are keys to succeed. I'm confident that my ability to learn fast, my motivation and dedication would make me valuable for your company.

An internship at your company would be a great opportunity for me to start my career in a great company, combining my love for data analytics and science.

Thank you for your consideration.

Sincerely,

Lorys Hamadache
